|   |  |   |   |

Continuation of 11. does NOT place the application in condition for allowance because: The claims remain rejected for the reasons of record. Applicant argues that nothing would have led a person of ordinary skill in the art to consult The Handbook of Thermoset Plastics and to contemplate the use of the specific neopentylglycol esters recited by the claimed invention. The Examiner respectfully disagrees and asserts that because Volpenhein discloses the use of non-toxic glycols generally, the use of any non-toxic glycol would have been obvious. Further, in view of The Handbook of Thermoset Plastics, the use of a polyol containing a branched chain having at least five carbon atoms and at least two OH groups, such a neopentyl glycol, would have been obvious because this compound was known to be useable in polyester formation and provided benefits of hydrolytic stability.
